

3D Models – Requirements for Submission

In late 2009, grant funding enabled the city to construct a 3D model of the downtown core area of Fullerton.

The model is designed to assist in the visualization, urban design, mapping and sustainable development of Fullerton.

Applicants of project proposals within the downtown Fullerton area and new, larger development projects elsewhere in the city may be asked to create and submit SketchUp models during the review and approval process.

DOWNTOWN^{3D}
Fullerton

Format

If you have been asked to provide your proposed project in our 3D model format:

1. Please download the appropriate **SketchUp file/files** from:
http://www.cityoffullerton.com/about/maps/3d_model_downloads.asp. A map graphic on the download page will help you locate the file corresponding to your project area.
2. Using the downloaded model, insert your proposed structures into the downloaded model and provide the modified data to the planner assigned to your project. If your project proposes the demolition of an existing building in the model, please remove the building(s) from the model.

It is important that you use our SketchUp files for submission as the data must be compatible with our geographic information software and existing files.

Level of Detail

At minimum, new submissions should include:

1. Building footprint of the new or replacement building(s), extruded to the height and dimensions of outer building walls.
2. Roof style and pitch of the new or replacement building(s). (No texture or material surfaces should be applied.)
3. Any large and/or architecturally significant exterior building(s) features (extended rooflines, columns, towers, cupola, etc.)

Optional details: Other features such as exterior windows and doors, exterior stairways, fences, walkways, etc. may be included **but are not required** unless specified by your project planner.

Questions

If you have questions about your submission or our website files, please contact Diana McCarthy, GIS Specialist at (714)738-6561.
