Re: Data Submittal for Groundwater Monitoring and Groundwater Extraction
and Treatment Pilot Testing, Third Quarter 2011, Raytheon Company (Former
Hughes Aircraft Company Facility), 1901 West Malvern Avenue, Fullerton, California

Dear Mr. Jeffers:

This letter has been prepared for the submittal of groundwater monitoring and groundwater treatment pilot testing data collected during the third quarter 2011 for the former Raytheon Company site located at 1901 West Malvern Avenue, Fullerton, California (the Site) (Figure 1). Groundwater monitoring activities were completed in general accordance with the California Environmental Protection Agency, Department of Toxic Substances Control (DTSC)-approved Groundwater Monitoring Workplan and Sampling and Analysis Plan (GMWPSAP) and subsequent addenda (DTSC, 2003 and 2011; Hargis + Associates, Inc. [H+A], 2003, 2011a, and 2011b). Groundwater treatment pilot testing continued throughout the third quarter 2011 in general accordance with the DTSC-approved Groundwater Extraction and Treatment Pilot Testing, Corrective Measures Study Workplan Addendum No. 4a (DTSC, 2009; H+A, 2009a and 2009b). The results of the third quarter 2011 quarterly groundwater monitoring and pilot groundwater extraction and treatment system (GETS) operation from July through September 2011 are included in this data submittal.

GROUNDWATER MONITORING

Groundwater monitoring consists of measuring groundwater levels and collecting groundwater samples from monitor wells and piezometers at the Site (Figure 2). Quarterly water level measurements and groundwater samples were collected in August 2011 at all monitor wells and piezometers in general accordance with the GMWPSAP and Addendum No.1 (Table 1).

Water Level Measurement and Groundwater Sample Collection

Groundwater monitoring included water level measurements in all Site monitor wells, piezometers, and extraction wells (Figures 2 and 3). Water levels were measured on August 1, 2011 (Table 2).

Groundwater samples were collected during the period from August 2 through August 5, 2011 (Appendix A). Analytical results are summarized in Table 3 and provided in Appendix B. Additional groundwater monitoring was conducted as part of routine operation and monitoring of the pilot GETS. A summary of the pilot GETS operation and monitoring is provided separately below.

Original and field-duplicate groundwater samples were analyzed by Advanced Technology Laboratories, Inc., Signal Hill, California (ATL) (Appendix B). Laboratory-split groundwater samples were analyzed by

Other Offices:
Mesa, AZ
Tucson, AZ

Mr. William Jeffers
November 1, 2011
Page 2

Exova, formerly Bodycote Testing Group, Santa Fe Springs, California (Appendix B). Chain-of-custody documentation was enclosed with each sample shipment. Results of groundwater sample volatile organic compound (VOC) and 1,4-dioxane analyses have been summarized (Table 3).

Quality Assurance/Quality Control

Quality assurance/quality control (QA/QC) samples collected in August 2011 consisted of trip blanks, equipment rinsate blanks, field duplicates, and laboratory split samples. Trip blanks and the water used to collect the equipment rinsate blanks were provided by ATL. Field duplicate and/or laboratory split samples were collected for analysis of VOCs and 1,4-dioxane from monitor wells MW-21, MW-29, and MW-30B in August 2011 (Table 3). The relative percent difference was calculated between the results of each field duplicate and each laboratory split sample with its corresponding original sample. This data quality assessment indicated that all QA/QC results for groundwater samples are within acceptable criteria, with the following exceptions:

- The relative percent difference (RPD) between the original and laboratory split sample results for 1,1,2-trichloroethane (1,1,2-TCA) and trichloroethene (TCE) in the groundwater samples collected from extraction well MW-21 in August 2011 exceeded acceptance criteria. Therefore, the detections of 1,1,2-TCA and TCE in the original, field-duplicate, and laboratory split samples are qualified as estimated "E" (Table 3; Appendix B).
- The RPD between the original and laboratory split sample results for 1,4-dioxane in the groundwater samples collected from monitor well MW-29 in August 2011 exceeded acceptance criteria. Therefore, the detection of 1,4-dioxane in the original, field duplicate, and laboratory split samples are qualified as estimated "E" (Table 3; Appendix B).
- The RPD between the original and laboratory split sample results for 1,1-dichloroethene (1,1-DCE) in groundwater samples collected from monitor well MW-30B in August 2011 exceeded acceptance criteria. Therefore, the detection of 1,1-DCE in the original, field duplicate, and laboratory split samples are qualified as estimated "E" (Table 3; Appendix B).

There were no detections of VOCs or 1,4-dioxane in the trip and/or laboratory method blanks analyzed with groundwater samples collected during the August 2011 groundwater monitoring event (Table 3; Appendix B).

The data quality assessment also included review of laboratory QA/QC results. Laboratory QA/QC results are within acceptable criteria with the following exceptions:

- 1,4-Dioxane results for monitor well MW-34B and extraction wells MW-21 and EW-01 were above quantitation range, therefore values for these samples are approximated by the lab, "E". ATL reported, due to isotope dilution these samples could not be diluted within linear range without diluting out the 1,4-dioxane d-8 internal standard. A 30,000 parts per billion dioxane standard was run on the analytical instrument and the recovery was 88 percent.

GROUNDWATER EXTRACTION AND TREATMENT PILOT STUDY

This section summarizes the pilot GETS operation within the three-month period of monitoring conducted during the third quarter of 2011. The pilot GETS consists of three groundwater extraction wells, the treatment system, and the disposal system; however, the current phase of pilot testing is operating using one extraction well (EW-02). The treatment system processes extracted groundwater through an advanced oxidation unit that utilizes ozone and hydrogen peroxide (HiPOx), followed by a granular

Mr. William Jeffers
November 1, 2011
Page 3

activated carbon polish prior to disposal to the sanitary sewer. A graphical representation of the system operational time in relation to water level measurements at current extraction well EW-02 and the previously utilized extraction wells EW-01 and MW-21 has been provided (Figure 4).

Initial startup of the pilot GETS took place on Tuesday, July 8, 2008. From July 2008 through November 2009, the pilot GETS was operated with extraction wells EW-01 and MW-21 operating at approximately 10 gallons per minute (gpm) each. Pilot GETS expansion took place between November 2009 and March 2010 in order to incorporate recently installed extraction well EW-02 into the extraction well network. The system maximum flowrate was also increased from 20 gpm to 50 gpm. Beginning in March 2010, the pilot GETS was operated at 50 gpm, entirely from extraction well EW-02.

During the third quarter 2011, the pilot GETS was operational approximately 83 percent of the available runtime and approximately 4,997,843 gallons of groundwater were treated and discharged to the sanitary sewer (Table 4). The average monthly discharge flowrate to the sanitary sewer during July 2011 through September 2011 was approximately 37.7 gpm. Since startup of the pilot GETS, approximately 38,871,705 gallons of groundwater have been treated at an average flowrate of 22.7 gpm through the end of September 2011 (Table 4).

Current monthly and quarterly pilot GETS monitoring activities include collecting samples from extraction wells in addition to collecting samples at treatment system sampling ports: Influent (extraction well EW-02 wellhead when it is the only extraction well operating), Post Particulate Filter, Post HiPOx Oxidation, Carbon Breakthrough, and Carbon Effluent (Tables 5 and 6; Figure 5). Samples collected during these activities were sent to ATL. Analytical results of the treatment system samples have been summarized (Table 6; Appendix B).

The pilot GETS system was shut down for expansion from approximately October 2009 to March 2010. The expansion was completed and extraction and treatment of groundwater resumed in March 2010. The pilot GETS was restarted on March 22, 2010 with extraction and treatment of groundwater from extraction well EW-02 at a rate of approximately 50 gpm. Extraction wells EW-01 and MW-21 are on standby for the current phase of pilot testing, but may be used for future phases of pilot testing or as part of a full-scale pump and treat system.

The pilot GETS continues to remove VOCs and 1,4-dioxane from extracted groundwater. The HiPOx ozone/peroxide advanced oxidation and carbon adsorption treatment units effectively removed VOCs from extracted groundwater. Breakthrough of low-level detections of VOCs was not observed in the third quarter 2011 monitoring samples with the exception of detections of 1,1-dichloroethane (1,1-DCA) at concentrations ranging from 0.72 micrograms per liter ($\mu\text{g/L}$) to 0.81 $\mu\text{g/L}$, which are just above the laboratory reporting limit, but below the pilot GETS permitted sewer discharge limit (Table 6). The effluent sample collected from the HiPOx advanced oxidation treatment unit contained low-level detections of bromate, a secondary by-product, during operations in the third quarter 2011. Carbon adsorption does not effectively remove this compound; however, this compound was detected at concentrations below the pilot GETS permitted sewer discharge limit. The operation of the advanced oxidation system continues to be optimized in an attempt to minimize the formation of bromate (Figures 5 and 6).

During the third quarter of 2011, the pilot GETS removed approximately 3.6 pounds of VOCs and 0.8 pound of 1,4-dioxane from extracted groundwater. Since startup of the pilot GETS in July 2008, approximately 88.7 pounds of VOCs and 15.6 pounds of 1,4-dioxane have been removed from groundwater through September 2011 (Figure 7).

FOOTNOTES

1,1-DCA = 1,1-Dichloroethane
 1,2-DCA = 1,2-Dichloroethane
 1,1-DCE = 1,1-Dichloroethene
 cis-1,2-DCE = cis-1,2-Dichloroethene
 PCE = Tetrachloroethene
 1,1,1-TCA = 1,1,1-Trichloroethane
 1,1,2-TCA = 1,1,2-Trichloroethane
 TCE = Trichloroethene
 TCFM = Trichlorofluoromethane
 (<) = Less than; the value is the Limit of Detection for that compound
 * = 1,4-Dioxane Action Level of 3 ug/l
 ** = California Notification Level for 1,4-Dioxane of 1 ug/l
 *** = Historical Range determined using original samples exclusively

Semi-VOCs = Semivolatile organic compounds
 E = Data qualified as Estimated in accordance with quality control criteria.
 "E" = Value above quantitative range in accordance with laboratory quality control criteria
 NA = Not analyzed for constituent
 FD = Field duplicate sample
 ORG = Original sample
 QA = Quality Assurance
 RB = Rinsate blank sample
 SPT = Split sample
 TB = Trip blank sample
 ug/l = Micrograms per liter
 MCL = Maximum contaminant level
 (-) = Not promulgated

Notes:

(a) Based on Effluent totalizer readings from CEFF.

(b) Total volume of water treated during the operational period divided by the total number of minutes in that operational period.

(c) Total volume of water treated during the operational period divided by the minutes of operation in that operational period.

(d) Operational period beginning 7/1/2008 (first month of system operation).

gpm = gallons per minute

Refer to previous quarterly reports for detail of 2008 thru 2010 operational summary

Treatment of groundwater from EW-02 initiated in 2010

TABLE 5
PILOT GROUNDWATER EXTRACTION AND TREATMENT SYSTEM SAMPLING SCHEDULE

COMPOUND(S) / CONSTITUENT	ANALYTICAL METHOD	SAMPLE CONTAINER	REPORTING DETECTION LIMITS (milligrams per liter)	SAMPLE FREQUENCY AND LOCATION								Quarterly Samples: Week 1+

Flow-Meter	N/A	N/A	N/A	X X X X						X X X X						X X X X	
FOOTNOTES																	
(a) Only one sample to be collected during sampling period.																	
1. Daily and weekly samples collected during the first month of operation will be repeated after major modifications to system equipment or operating parameters, as detailed in the Workplan.																	
2. If more than one extraction well is in operation, combined influent samples will be collected in addition to extraction wellhead samples, with the same sampling schedule as the extraction wellheads.																	
3. Carbon breakthrough will be collected from the effluent of the first carbon unit in series; when breakthrough of the first unit is detected, the breakthrough sample will be collected from the effluent of the second carbon unit in series.																	
4. QAPP, Quality Assurance Project Plan, Appendix B of Additional Groundwater Assessment Workplan, Hargis + Associates, Inc., April 25, 2003.																	

CRWQCB = California Regional Water Quality Control Board, Santa Ana Region

NPDES = National Pollutant Discharge Elimination System

WDR = Waste Discharge Requirement

Phosphate	09/09/11	mg/l	--	--	< 0.050	--	--	< 0.050	--	--

FOOTNOTES

MCL = Maximum Contaminant Level or Drinking Water Action Level, if applicable

ug/l = Micrograms per liter

mg/l = Milligrams per liter

(--) = Not scheduled for performance monitoring

(<) = Less than; the numerical value is the Limit of Detection for that compound

INF* = Influent (same as EW-02, when active)

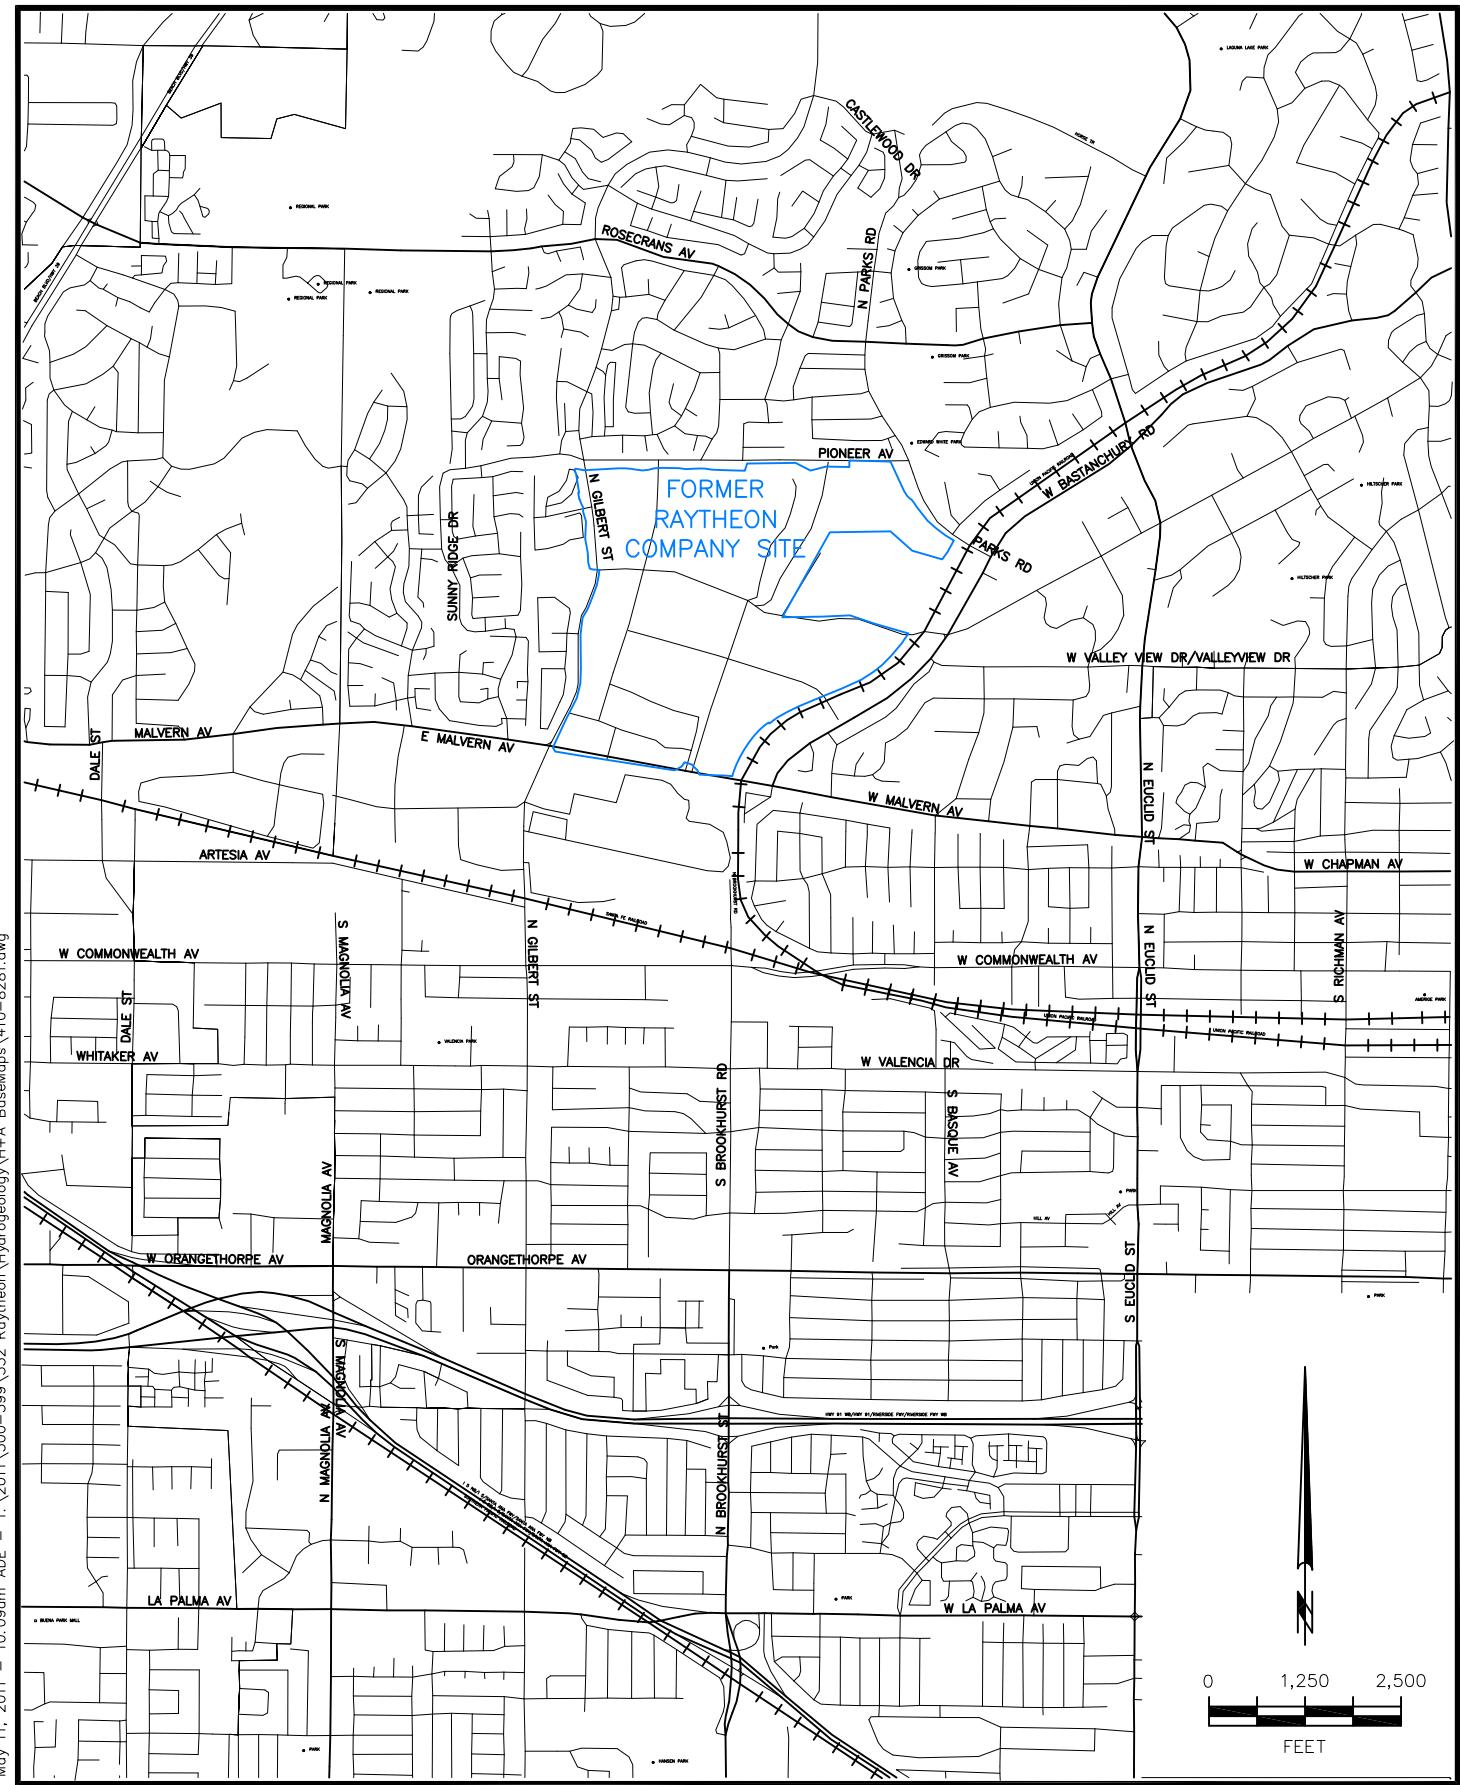

PF = Post Particulate Filter

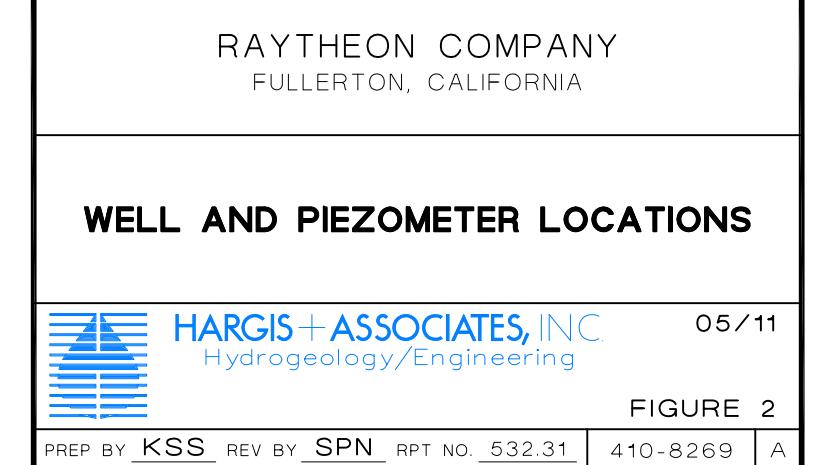

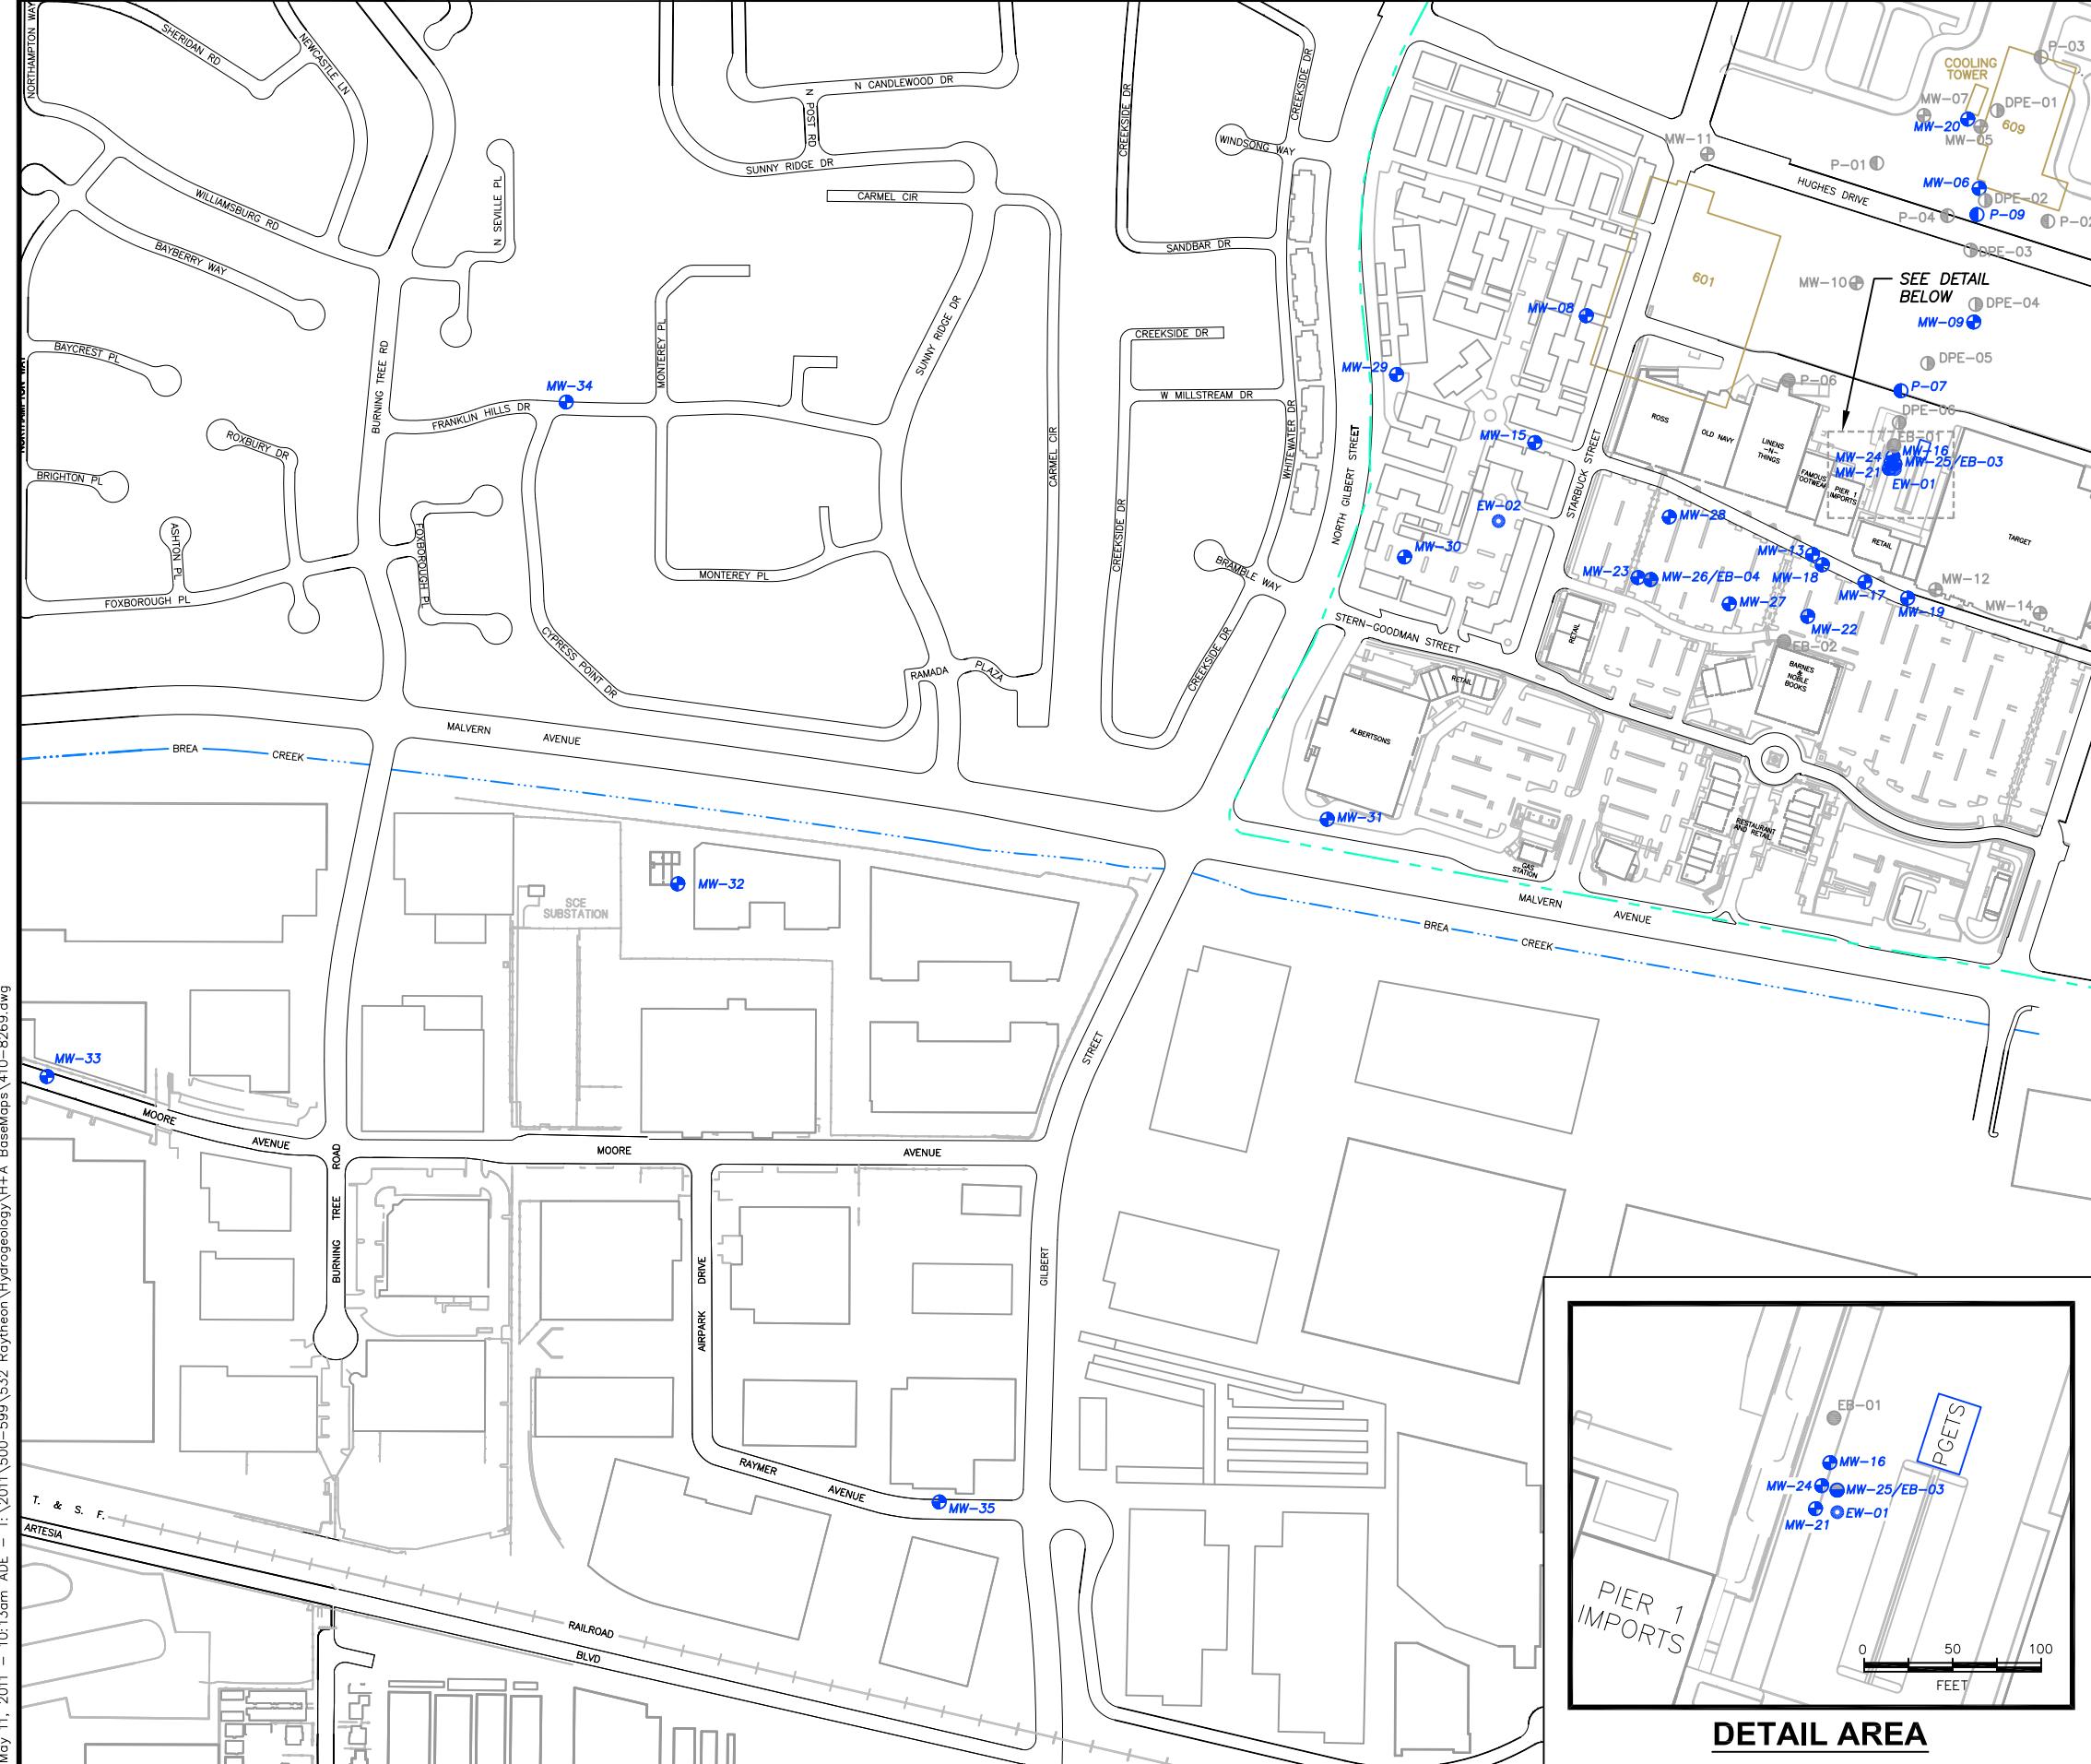

POX = Post Hipox Oxidation

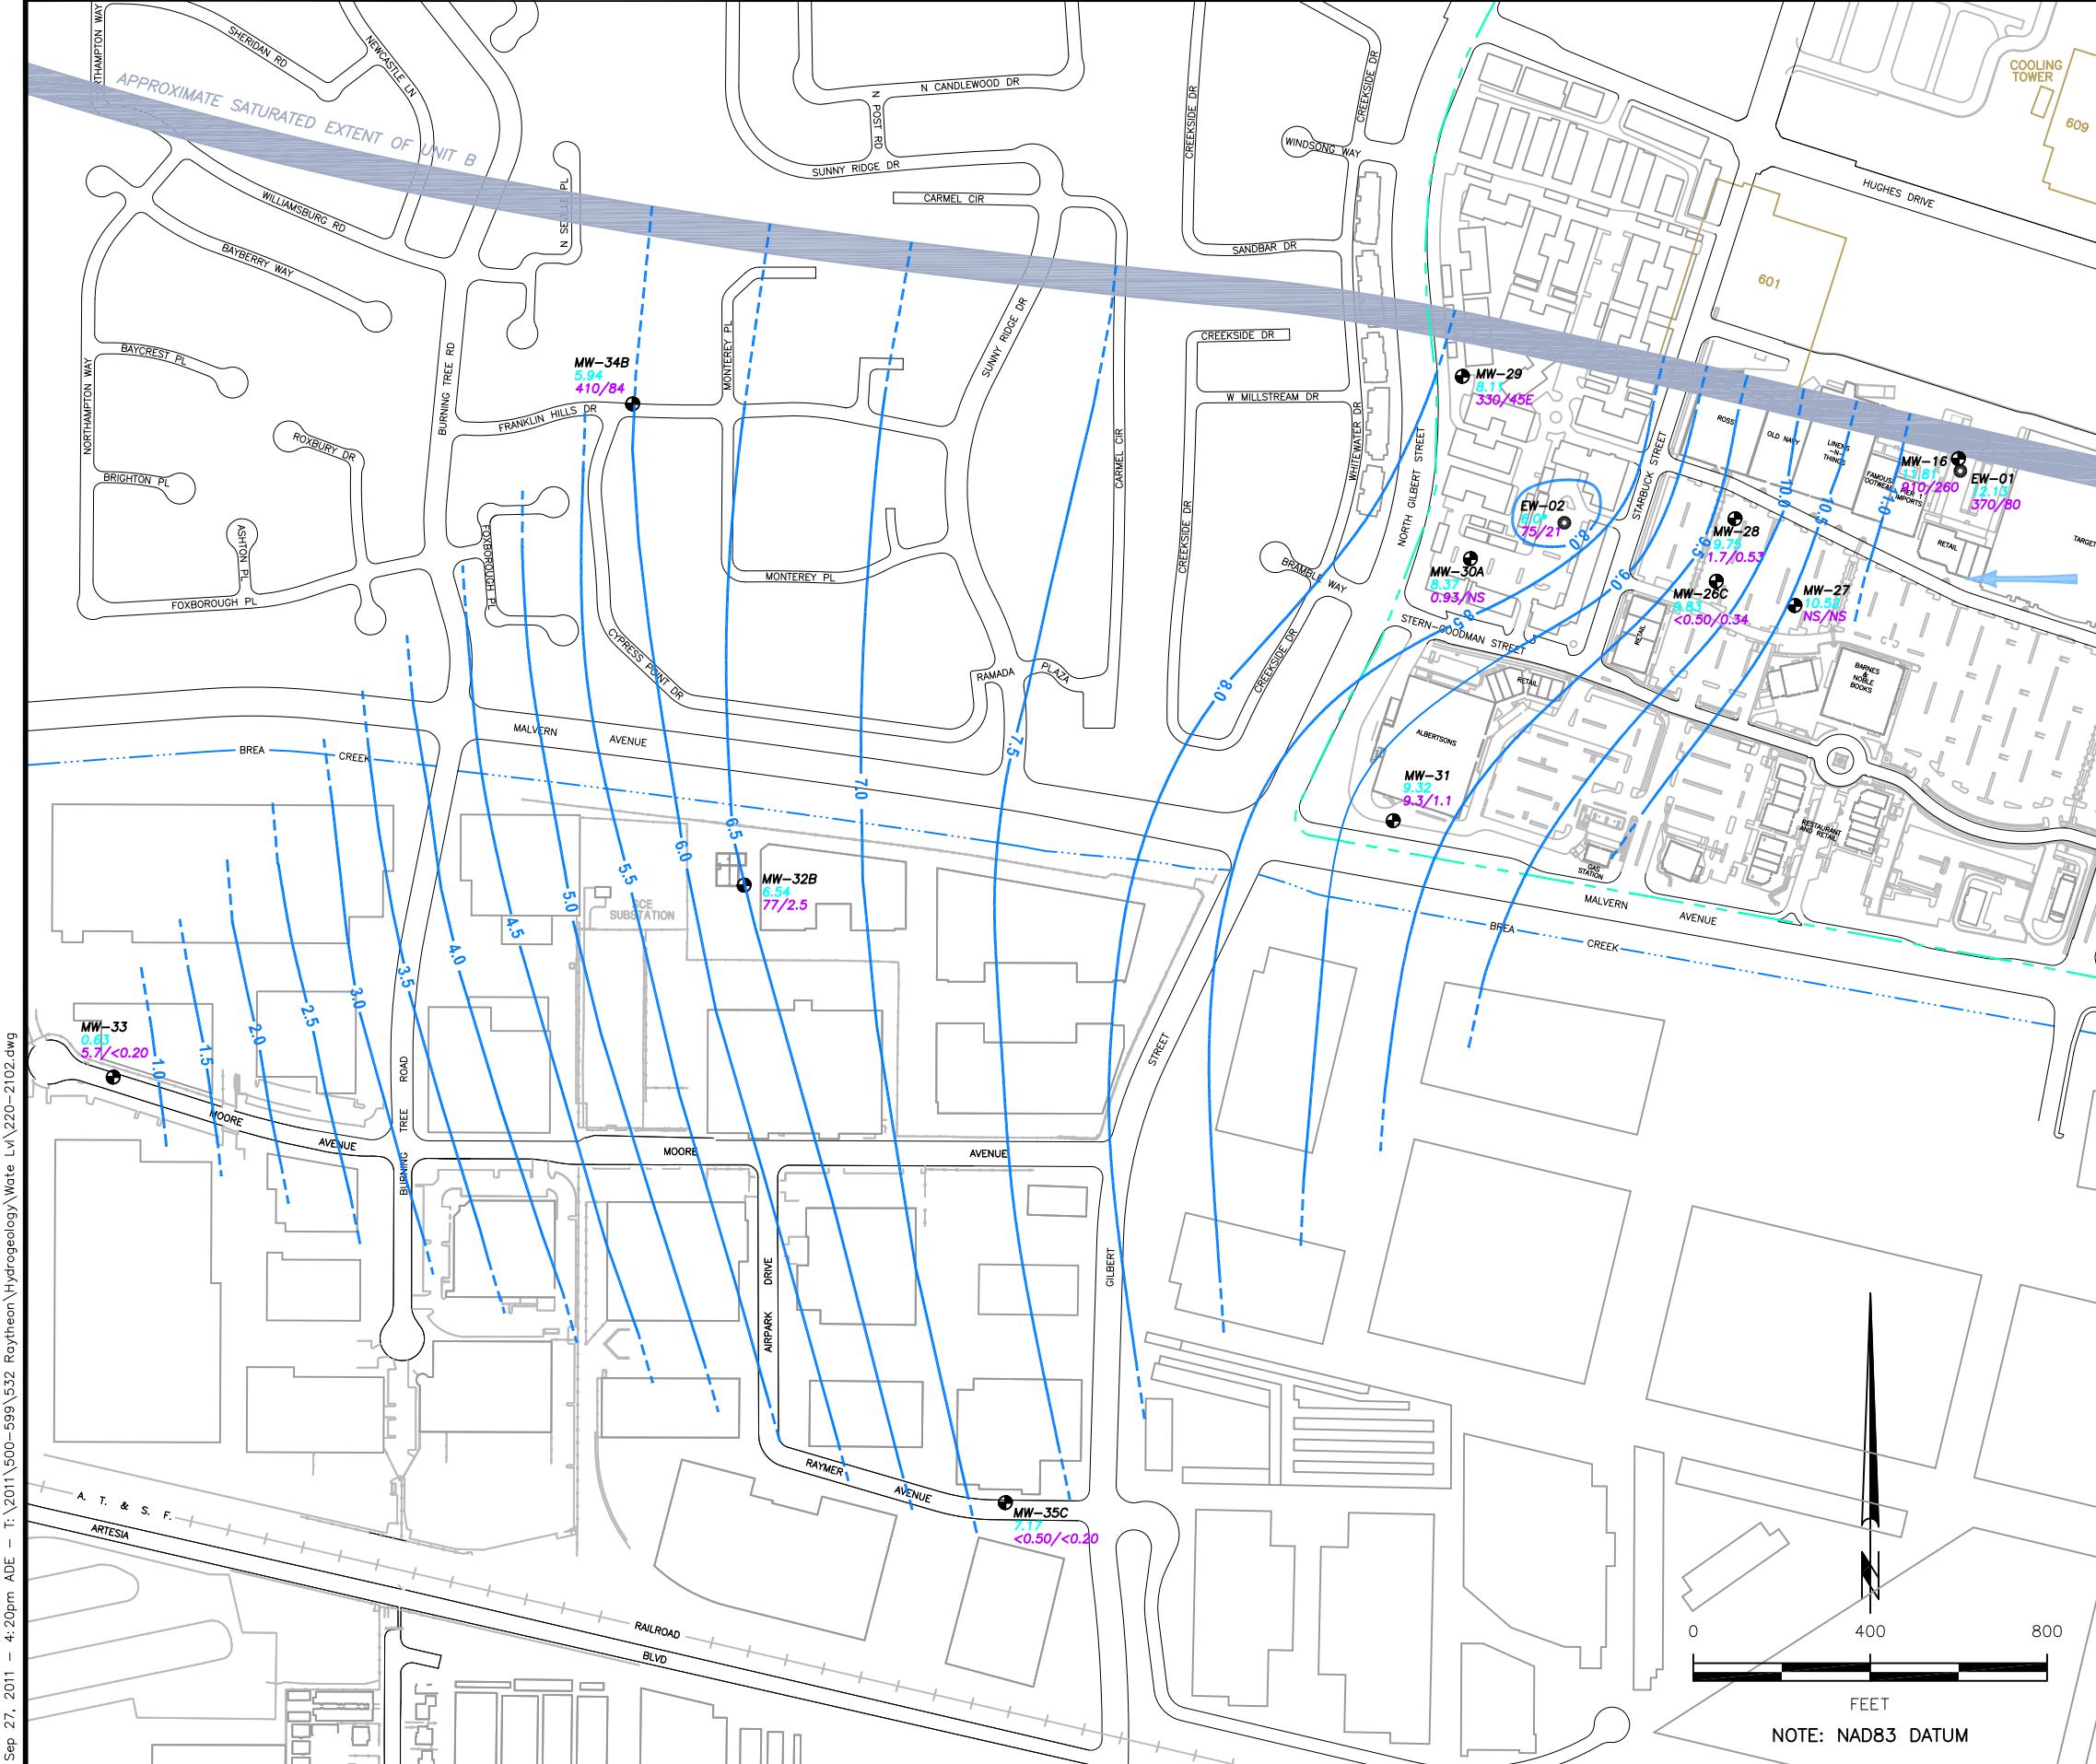

CBT = Carbon Breakthrough

CEFF = Carbon Effluent

CaCO₃ = Calcium carbonate
